Corporate Presentation

Technology & Capacities

Technology must go
beyond supporting business.
 It must **advance it.**

Together, let's make your products smarter.

Your customer experiences more exceptional.

Your people more productive.

Your processes more profitable and your systems more powerful.

We advance every aspect of your business with digital at scale and speed.

a company with digital dexterity & diversity that is built for you

Our Culture

Shaped by a diverse group of entrepreneurial people working together with Service Priority and Delivery to create a better way

Outsource to Our Strengths

We work with companies who believe Technology can advance all aspects of business, governance & people.

Our Strengths are shaped by Professionals in IT Skills of Tradition and Tomorrow to drive your business forward through consulting on Infrastructure Support, Product, Software, Analytics & AI Development, network, video conference, VOIP, troubleshooting, BPO & KPO services

Our Growth

Shaped with Performance and Service. Our ambition will always be to see and seize new opportunities that serve our clients and drive sustained business performance over the long term

- Security Policies
- Digital Marketing
- Cross Sell and Upsell
- Business Communication and collaboration Support
- Big Data Analytics and Reporting

We build digital twins : The Technical enabler

Empowered with **Artificial Intelligence** Technology coupled with **Block Chains**, we create a virtual surrogate which is more efficient than a blueprint and schematic layouts, which can play multiple roles that complement each other.

These virtual surrogates can be distributed across various deployment platforms.

As the optimization involve simulation algorithms, the **cloud** is an appropriate choice, in instances that require twin to play and observational or operational role, **edge deployment** is a natural preference, at either the gateway or device level.

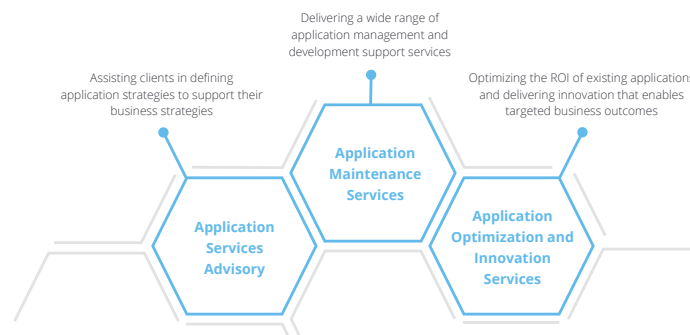

Value-driven Application Management Services

A world-class application support framework with 5 dimensions for Value Delivery:

- Strategy
- Governance
- Organization
- Process
- Technology

IT landscapes today are large and diverse, trending toward more complexity, not less. That complexity has become costly – with 65 percent of IT dollars now spent maintaining existing technology. To control spending, many companies created new, specialized functions dedicated to managing applications and infrastructure. These have become prime candidates for outsourcing, driving explosive growth in the Application Management Services (AMS) marketplace.

Enterprise Apps for any Business

A good mobile application means satisfying a lot of user's preferences.

Creating a new app is somehow similar to building a house: you need to have a good foundation in order to provide a good, solid product. In our case, we pick the best mobile app technology stack, which refers to the union of language, platform, framework, and other tools used for the development of the application.

Mainly we are focusing on such mobile stack categories as:

Front-end, also known as client-side development. It refers to the development of the interface which is going to interact with end-users;

Back-end, a data access layer, which is connected with databases, scripting, website architecture, and server-side development in general;

Development that refers us to the tools which provide libraries and interfaces to build the application;

Supporting, the main idea of which is providing security, high functionality, and future long-term improvement.

Outsource Your Digital

to our expertise in State-of-art technology, security, multi-domain expertise, support, maintenance and low cost offerings.

Digital has opened the door to new services products, customer touchpoints and improved operational efficiency.

As service firms embrace digital, they need business assurance strategies that extend conventional quality assurance methods to address the nuances of emerging technologies such as **blockchain** and **advanced artificial intelligence (AI)**.

Moreover, they need assurance that their strategies can accommodate changes in the ever-shifting regulatory landscape wrought by the acceleration of digital within the core of their businesses.

Last but not least, we understand the firms need to validate user journeys across the stakeholder ecosystem including bank employees, insurers, regulators and third-party agents, not limited to customers.

We at **ESMSYS** go a step further to ensure that we deliver a consistent user experience across touchpoints and technologically preempt gaffes that could potentially undermine their financial and/or reputational integrity.

Advanced AI in the form of machine learning is helping firms embrace process automation and adopt a customer-first approach to ensure high-quality financial services are delivered at speed and in ways that anticipate customer needs, wants and desires. Facilitating faster processing cycles, infallible advice and customizable services, AI's intelligent algorithms are quickly digitizing the entirety of many industries.

Sharepoint as an eQMS, eDMS & Search driven solution for Pharma Companies

A growing number of global pharmaceutical companies are deploying SharePoint as the means to manage teams and projects. Microsoft Sharepoint is a browser-based collaboration and document management platform. It is a full-fledged content management system allowing groups to set-up a centralized, password protected space for document sharing.

At ESMSYS we understand how your organization needs are met better with the advantages SharePoint offers. We have SharePoint experts and also offer integration services.

We provide the services to configure and manage the SharePoint installation and meet the requirements specification, qualification and validation services you will need to ensure the system meets regulatory requirements. We work closely as a team to deliver a validated outcome.

Regulatory agencies do expect that the implementation of the hardware and software by regulated company is done in such a way that the hardware and software is compliant with the CFRs or other regulations.

ESMSYS Consultancy provides a useful guidance on how to do this.

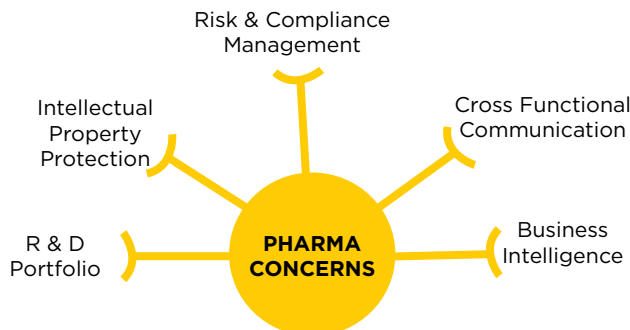

A Pharma company with global presence can escalate global reputation with our solutions.

Online search effectively unlocks the business processes a client wants driven from their website. ESMSYS's ability to generate search optimized SharePoint workflows allows Pharmaceutical companies to manage nuanced search experiences, while delivering direct marketing/segmentation data. The seamless content aggregation is both flexible and automated. ESMSYS is able to streamline its promotional presentation using state-of-the-art Solutions.

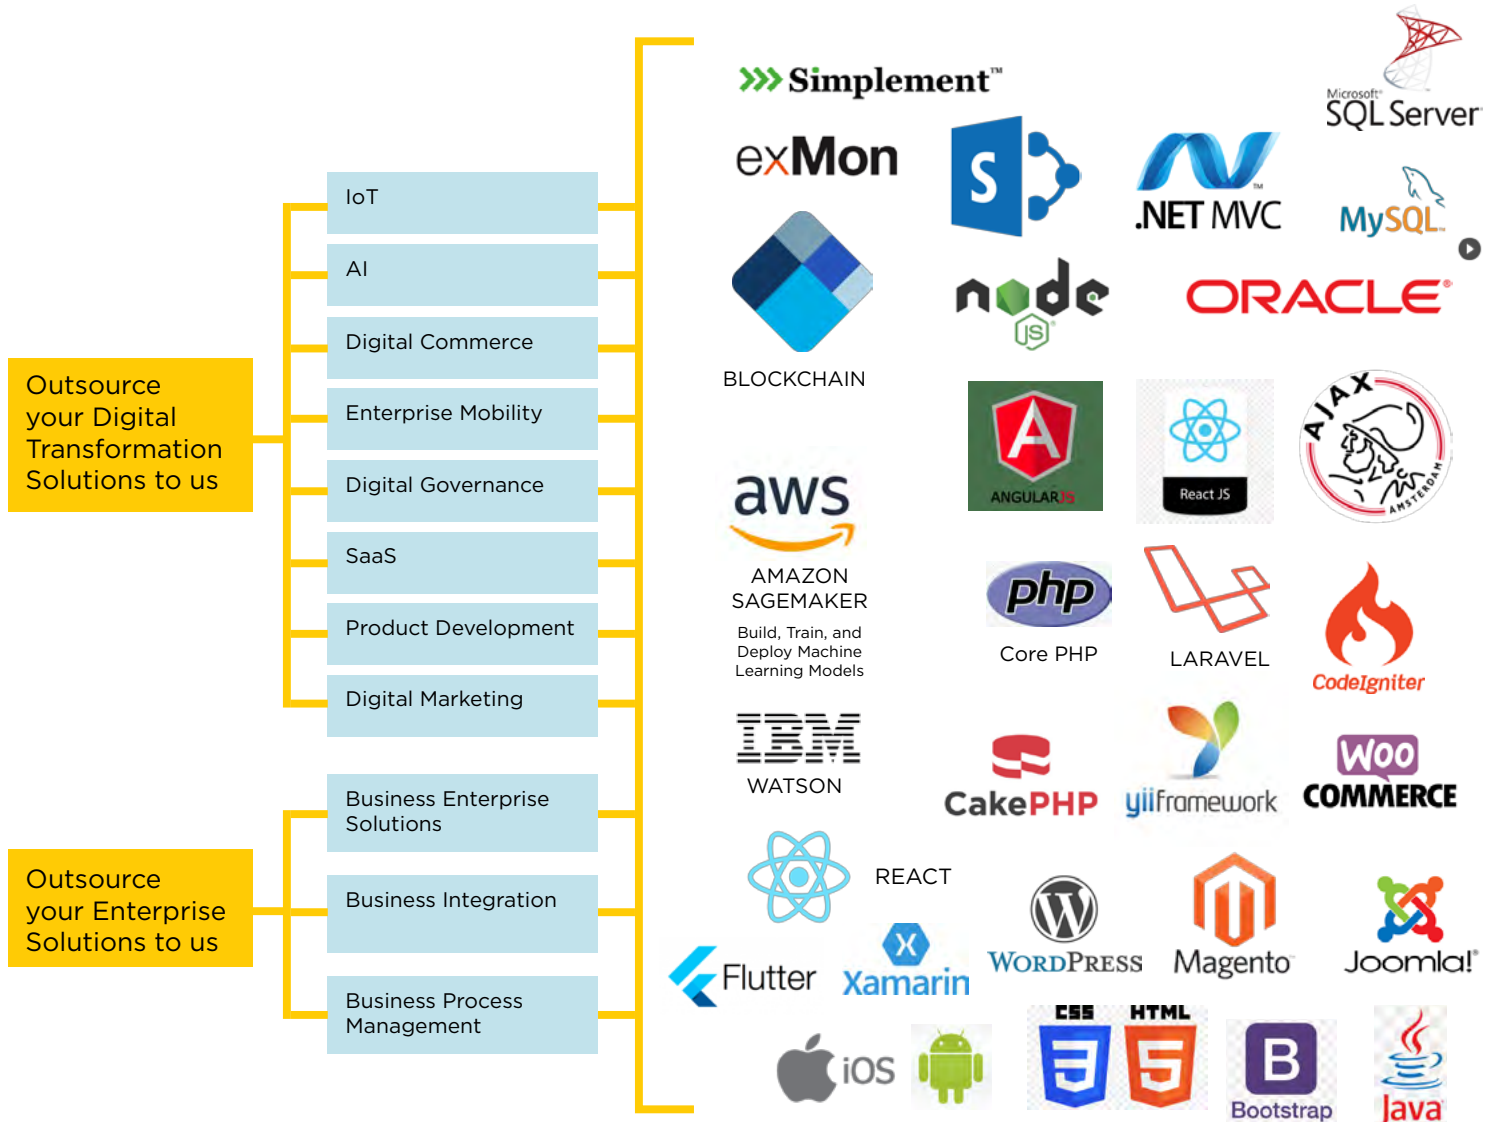

SharePoint workflows

ESMSYS's single point of search generates metadata-driven grouped results pages applicable to SharePoint workflows precisely because of its capacity to separate search outcomes. The consequent division of information into articles, images, products and videos can be readily adapted for application by SharePoint workflow processing.

Pharmaceutical organizations that develops medical treatments tailored to patients' specific medical needs, to help physicians and health care personnel, sought these solutions.
